

Examiner's report

CTSI Professional Competency Framework

Stage 2: Product Safety Written Examiner's Report September 2023

General

Only one candidate sat the Product Safety Examination during this round, and therefore it is not possible to comment on answers provided or the marks achieved. The candidate achieved a pass mark which means that this round had a 100% pass rate!

The examination was set in the same format as previous ones, consisting of short answer questions in Part A and longer answer questions in Part B, with four from six providing a maximum of 40 marks and two from four providing the remaining sixty marks.

As a general rule it must be emphasised that it is important to read the question carefully before answering and focus on what is being asked rather than providing a lot of information, which although demonstrating understanding, does not get marks as it is not directly relevant to the question asked. It is acceptable to provide answers in note form or as bullet points.
